

## **Interruptible Injection and Withdrawal Capacity Service**

Interruptible Injection and Withdrawal Capacity Service allows the System User to use interruptible injection and withdrawal capacity in an amount equal to a percentage of the firm injection and withdrawal capacity specified in the System User's contract, defined in advance - for the relevant storage year - , in the relevant injection (01 April, 06:00 - 01 October, 06:00) and withdrawal period (01 October, 06:00 - 01 April, 06:00) of the relevant storage year.

System Users are eligible to use the Interruptible Injection and Withdrawal Capacity Service only if they have firm injection and withdrawal capacities in the period for which the service is announced.

The request shall be indicated on the nomination platform by submitting the nomination.

In the event of interruption, in any case, the contracted capacity or service related to the shortest time period will be interrupted, while if there are equal periods, the capacity or service related to the smallest unit price will be interrupted in the first round. In case of further interruptions, the same principle shall apply to evaluating the capacities and services with regard to the order of interruption. Capacities sold as interruptible capacities can be interrupted.

In case of interruption, HGS will interrupt the simultaneously used interruptible capacities of the Service based on the nominations submitted, applying the pro rata principle.

The fee for the Interruptible Injection and Withdrawal Capacity Service shall be the fee as per the applicable Fee List.

Capacities used via the Interruptible Injection and Withdrawal Capacity Service cannot be subject to primary or secondary trading.

The financial settlement and invoicing of the Interruptible Injection and Withdrawal Capacity Service shall be carried out posteriorly and monthly, based on the accepted daily allocated value.

Further details of usage shall be specified in the relating contract and announcement.
