

Peak Plus and Daily Peak Plus Peak Capacity Storage Service

Peak Plus capacity service allows the System Users to book additional injection and/or withdrawal capacities on a firm basis in addition to their already obtained and booked working gas, withdrawal and injection capacities without purchasing any additional working gas capacity. Following the annual capacity booking, MFGT determines separately in each year the quantity of Peak Plus (injection and withdrawal) capacities available for booking. The service is available to System Users that have a storage capacity booking contract.

System Users shall undertake to conclude a supplementary contract with MFGT in case of an accepted capacity request.
